

Transvigorate™

MICROBIAL CONSORTIA

LIVE & SPORE FORM BIOLOGICAL PACKAGE

+

FBS TRANSIT®

FBS SCIENCES' BIOSTIMULANT TECHNOLOGY

WORKING SYNERGISTICALLY TO IMPROVE PLANT AND SOIL HEALTH

Increased Nutrient Use Efficiency Leads to...

Tolerance to and Recovery from Stress

Increased Sugar Movement and Crop Quality

Increased Nutrient Mobility & Uptake

Improved Photosynthetic Processes

Increased Total Root Surface Area and Root Exudate Production

Increases Plant-Beneficial Soil Organic Matter

Boosts the Productivity of the Soil Microbiome

Transforms Tied Up Nutrients into their Plant-Available Forms

Improved Yield Consistency in Spite of Soil Variability

CARBON BOOST
Soil Health Line

Transvigorate™ brings together the power of two technologies to transform plant health and soil health at the same time. Transvigorate delivers proven microbial consortia that colonize the soil rhizosphere. They help cycle soil carbon in order to promote both a healthier plant and healthier soil. They solubilize nutrients to feed plants at key growth stages. FBSciences' flagship biostimulant technology works in the plant to support key physiological processes including rooting, photosynthesis, sugar movement, stress mitigation and nutrient mobility. The two work synergistically to drive yield and quality while improving soil health.
